

THREAT INTELLIGENCE REPORT

Information Gathering & Threat Analysis

Target:

<https://movieboxph.app>

Report Date	May 08, 2026
Classification	CONFIDENTIAL
Threat Level	HIGH
Analysis Type	Passive OSINT / VirusTotal

1. Executive Summary

This report presents a comprehensive threat intelligence and information gathering analysis of the target domain movieboxph.app. The investigation was conducted using passive open-source intelligence (OSINT) techniques, including WHOIS domain lookups, VirusTotal URL analysis, IP geolocation, and HTTP response header inspection.

The analysis reveals that movieboxph.app is flagged as malicious and/or phishing by 17 out of 93 security vendors on VirusTotal. The domain was registered in November 2025 and is currently protected behind Cloudflare infrastructure, making direct server attribution difficult. Multiple leading cybersecurity vendors — including Kaspersky, BitDefender, Fortinet, Sophos, and VIPRE — have classified the site as a phishing or fraud platform.

Key findings at a glance:

- 17/93 security vendors detect the URL as malicious, phishing, or fraud
- Domain registered November 2025 on Namecheap; uses Cloudflare DNS
- Serving IP 104.21.14.40 is a Cloudflare Anycast CDN address (San Francisco, US)
- HTTP 520 status code — non-standard Cloudflare error indicating backend issues or active blocking
- Response headers suppress caching (no-store, no-cache) — typical of phishing pages evading detection

2. Domain Registration & WHOIS Analysis

WHOIS lookup data provides foundational information about who registered the domain, when, and through which registrar. This section summarizes the registration record obtained for movieboxph.app.

2.1 WHOIS Data Summary

Domain	movieboxph.app
Registered On	2025-11-05
Expires On	2026-11-05
Updated On	2025-11-10
Status	client transfer prohibited
Name Server 1	dale.ns.cloudflare.com
Name Server 2	susan.ns.cloudflare.com
Registrar	Namecheap Inc.
IANA ID	1068
Registrar Email	support@namecheap.com
Abuse Email	abuse@namecheap.com
Abuse Phone	+1.6613102107

Domain Information	
Domain:	movieboxph.app
Registered On:	2025-11-05
Expires On:	2026-11-05
Updated On:	2025-11-10
Status:	client transfer prohibited
Name Servers:	dale.ns.cloudflare.com susan.ns.cloudflare.com

Registrar Information	
Registrar:	Namecheap Inc.
IANA ID:	1068
Email:	support@namecheap.com
Abuse Email:	abuse@namecheap.com
Abuse Phone:	+1.6613102107

Figure 1: WHOIS record for movieboxph.app (Source: whois.com)

2.3 WHOIS Observations

The domain was registered on November 5, 2025 — a relatively recent registration date. Newly registered domains are a common indicator of malicious infrastructure, as threat actors frequently register fresh domains to avoid existing blacklists. The domain uses Cloudflare nameservers, which provides the operator with DDoS protection, traffic proxying, and the ability to mask the true origin server IP address. The "client transfer prohibited" status means the domain cannot be transferred to another registrar without authorization from the current registrant, and is a default lock applied by Namecheap at registration. Abuse reports may be directed to abuse@namecheap.com.

3. VirusTotal URL Analysis

VirusTotal aggregates results from over 90 antivirus engines and security vendors to assess the threat level of URLs, files, and IP addresses. The following analysis is based on a VirusTotal scan of <https://movieboxph.app/>.

3.1 Detection Summary

Target URL	https://movieboxph.app/
Total Vendors Scanned	93
Vendors Flagging as Malicious	17
Detection Rate	18.3%
HTTP Status Code	520 (Blocked by WAF)
Content Type	text/html; charset=UTF-8
First Submission	2025-12-09 17:47:29 UTC
Last Submission	2026-05-06 13:10:38 UTC
Last Analysis	2026-05-06 13:10:38 UTC
Tags	text/html, blocked-waf

3.3 Category Classifications by Vendor

Multiple security vendors have independently categorized the domain. The following categories were reported:

alphaMountain.ai	Phishing
Sophos	Phishing and Fraud
Webroot	Phishing and Other Frauds
Forcepoint ThreatSeeker	Phishing and Other Frauds

3.4 Screenshot — Security Vendors Analysis (Detection Tab)

Security vendors' analysis ⓘ			
ADMINUSLabs	Malicious	alphaMountain.ai	Phishing
BitDefender	Phishing	Chong Lua Dao	Malicious
CRDF	Malicious	CyRadar	Phishing
Forcepoint ThreatSeeker	Phishing	Fortinet	Phishing
G-Dat	Phishing	Kaspersky	Phishing
Lionic	Phishing	Lumu	Malware
Rising	Phishing	Seclookup	Malicious
Sophos	Phishing	VIPRE	Phishing
Webroot	Malicious	ESET	Suspicious
Abusix	Clean	Acronis	Clean
AlLabs (MONITORAPP)	Clean	AlienVault	Clean
Antiy-AVL	Clean	BlockList	Clean
Blueliv	Clean	Certego	Clean

3.5 Threat Detection Breakdown

The following table lists all vendors that flagged the URL as malicious or suspicious:

Security Vendor	Detection Result
ADMINUSLabs	Malicious
alphaMountain.ai	Phishing
BitDefender	Phishing
Chong Lua Dao	Malicious
CRDF	Malicious

Security Vendor	Detection Result
CyRadar	Phishing
Forcepoint ThreatSeeker	Phishing
Fortinet	Phishing
G-Data	Phishing
Kaspersky	Phishing
Lionic	Phishing
Lumu	Malware
Rising	Phishing
Seclookup	Malicious
Sophos	Phishing
VIPRE	Phishing
Webroot	Malicious
ESET	Suspicious

4. HTTP Response & Technical Fingerprint

Analysis of the HTTP response headers provides technical insights into the server configuration, infrastructure provider, and potential evasion tactics employed by the site operator.

4.1 Response Details

Final URL	https://movieboxph.app/
Serving IP Address	104.21.14.40
HTTP Status Code	520
Body Length	7.17 KB
Body SHA-256	1f47ebd8bbd8ccae44ade50e9062be7d92b6d9e4af268e429938feb599b8b187
Server	Cloudflare
Content-Type	text/html; charset=UTF-8
Cache-Control	private, max-age=0, no-store, no-cache, must-revalidate
Referrer-Policy	same-origin
X-Frame-Options	SAMEORIGIN
Expires	Thu, 01 Jan 1970 00:00:01 GMT (expired)
CF-Ray	9f78414ccc6ccb8a-LAX
Alt-Svc	h3=":443"; ma=86400
Priority	u=0,i

4.2 Screenshot — HTTP Response Headers

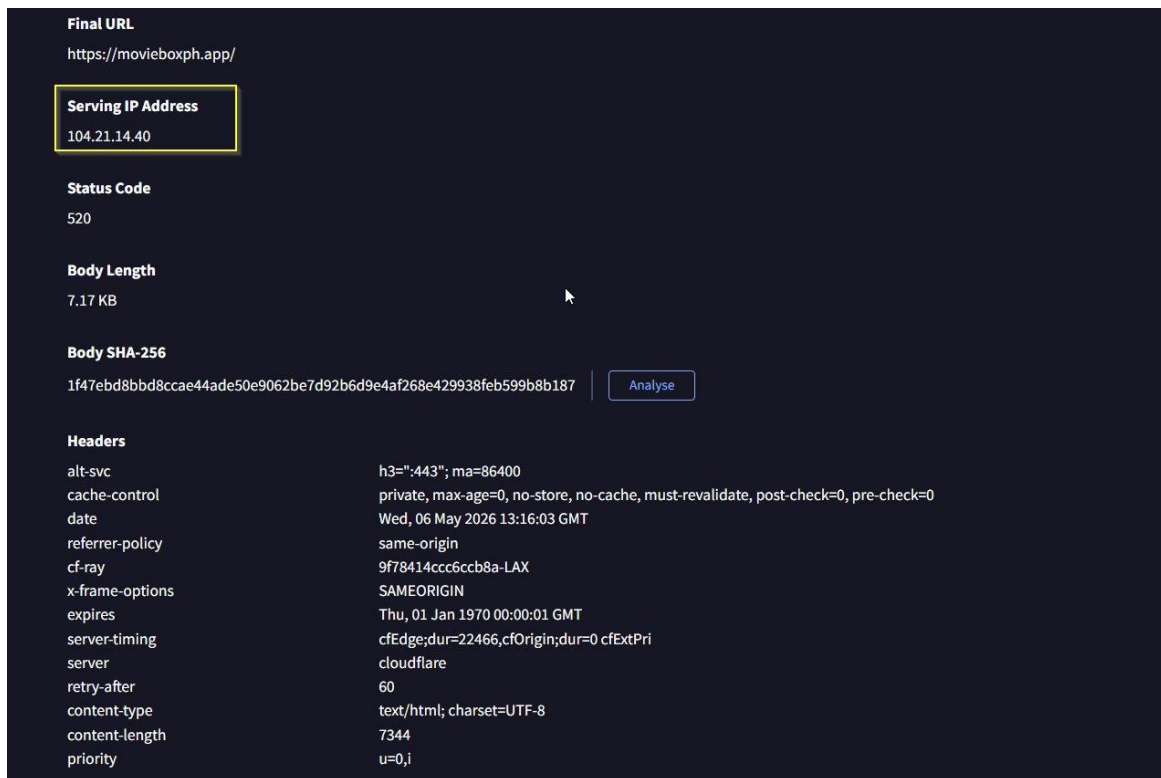

Figure 4: HTTP response headers and technical details from VirusTotal analysis

4.3 Technical Observations

HTTP 520 Status Code:

A 520 status is a non-standard Cloudflare-specific code indicating that the origin server returned an unexpected response. This could mean the server is actively blocking scanners, the site is under maintenance, or the backend has been temporarily taken down due to abuse reports.

Cache-Control Headers:

The no-store, no-cache, must-revalidate directives prevent the response from being cached anywhere. This is atypical for legitimate websites but is a known tactic used by phishing pages to ensure each visitor gets a fresh, potentially personalized response and to avoid being captured by security scanners.

Cloudflare Infrastructure:

The site routes through Cloudflare, as confirmed by the CF-Ray header and the server value. This provides the real operator with anonymity by masking the true origin server IP. Cloudflare's WAF (Web Application Firewall) is active, indicated by the "blocked-waf" tag in VirusTotal.

5. IP Address & Geolocation Analysis

The serving IP address identified through VirusTotal is 104.21.14.40. This IP was analyzed using ipinfo.io to determine its ownership, ASN, and geolocation.

5.1 IP Geolocation Details

IP Address	104.21.14.40
Organization / ASN	AS13335 — Cloudflare, Inc.
IP Type	Anycast CDN / Hosting / Proxy / Webserver
City	San Francisco
State	California
Country	United States
Postal Code	94107
Coordinates	37.7621 N, 122.3971 W
Timezone	America/Los_Angeles

5.2 Screenshot — IP Geolocation Lookup

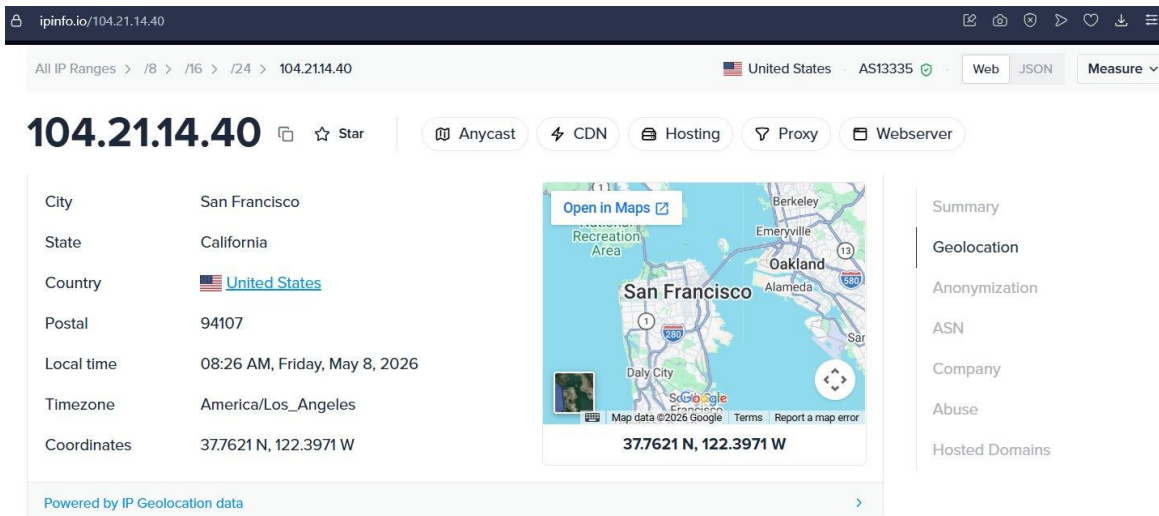

The screenshot shows the ipinfo.io website displaying geolocation data for the IP address 104.21.14.40. The browser address bar shows 'ipinfo.io/104.21.14.40'. The page header includes navigation links like 'All IP Ranges', 'United States', 'AS13335', and tabs for 'Web', 'JSON', and 'Measure'. The main content area features the IP address '104.21.14.40' with a star icon and a 'Star' button. Below this, there are buttons for 'Anycast', 'CDN', 'Hosting', 'Proxy', and 'Webserver'. A table on the left lists geolocation details: City (San Francisco), State (California), Country (United States), Postal (94107), Local time (08:26 AM, Friday, May 8, 2026), Timezone (America/Los_Angeles), and Coordinates (37.7621 N, 122.3971 W). To the right of the table is a map of San Francisco with a red pin indicating the location. The map includes labels for 'San Francisco', 'Oakland', 'Alameda', 'Daly City', and 'Berkeley'. The coordinates '37.7621 N, 122.3971 W' are displayed at the bottom of the map. On the far right, there is a sidebar with a 'Summary' section and a list of links: 'Geolocation', 'Anonymization', 'ASN', 'Company', 'Abuse', and 'Hosted Domains'. At the bottom of the page, it says 'Powered by IP Geolocation data'.

Figure 5: ipinfo.io geolocation result for 104.21.14.40 (Cloudflare Anycast IP)

5.3 IP Analysis Notes

The IP address 104.21.14.40 belongs to Cloudflare's Anycast network (AS13335). Anycast IPs are shared across Cloudflare's global network of data centers, meaning the geolocation shown

(San Francisco, CA) reflects Cloudflare's data center — not the physical location of the actual website operator or origin server.

This is a deliberate obfuscation mechanism that shields the true hosting provider and operator behind Cloudflare's reverse proxy. The actual origin server could be located anywhere in the world. Further investigation would require legal requests to Cloudflare or analysis of site-specific content and infrastructure artifacts.

6. Risk Assessment & Indicators of Compromise (IoCs)

6.1 Threat Level: HIGH

Threat Category	Phishing / Fraud / Malware Distribution
Confidence Level	HIGH — confirmed by 17+ reputable vendors
Active Threat	Yes — last detected May 6, 2026
Infrastructure	Cloudflare-proxied — origin server hidden
Domain Age	~6 months (newly registered — high-risk indicator)
Recommended Action	Block at DNS / Proxy / Firewall level immediately

6.2 Indicators of Compromise (IoCs)

Domain (IoC)	movieboxph.app
URL (IoC)	https://movieboxph.app/
Serving IP	104.21.14.40 (Cloudflare proxy)
ASN	AS13335 — Cloudflare, Inc.
Body SHA-256	1f47ebd8bbd8ccae44ade50e9062be7d92b6d9e4af268e429938feb599b8b187
Nameservers	dale.ns.cloudflare.com, susan.ns.cloudflare.com
Registrar	Namecheap Inc.
CF-Ray ID	9f78414ccc6ccb8a-LAX

6.3 Recommendations

1. Block the domain movieboxph.app at DNS resolver, web proxy, and firewall levels across all endpoints.
2. Add the domain and its IP (104.21.14.40) to threat intelligence feeds and SIEM platforms.
3. Submit an abuse report to Namecheap (abuse@namecheap.com) and Cloudflare for domain/hosting takedown.
4. Alert users who may have visited the site to check for credential compromise or malware infection.
5. Monitor for re-registration of similar domains (e.g., movieboxph variants) and typosquatting patterns.

7. Conclusion

This threat intelligence report confirms that movieboxph.app is an active malicious domain classified primarily as a phishing and fraud site. The domain exhibits multiple hallmarks of a threat actor-operated site: recent registration (November 2025), use of Cloudflare for anonymity and DDoS protection, aggressive cache-suppression headers, and detection by 17 out of 93 reputable security vendors — including industry leaders Kaspersky, BitDefender, Fortinet, and Sophos.

The use of Cloudflare's infrastructure effectively conceals the true origin server, making it difficult to attribute the operation to a specific host or geography without legal action against Cloudflare. The "blocked-waf" response suggests Cloudflare may itself have suspended the site partially due to abuse, though the domain remains registered and may pivot to new infrastructure.

Immediate defensive actions — including DNS blocking, abuse reporting to the registrar, and user alerting — are strongly recommended. Organizations and individuals should treat any traffic to or from this domain as a high-severity threat indicator.
